

# Cornwall-Lebanon School District Curriculum Overview

## AP Computer Science A- High School

| 33     | length of time in weeks | Concepts & Competencies  | Common Assessments  | Academic Standards (PA Core if applicable) |
|--------|-------------------------|--|---|--|
| Unit 1 | 5                       | <p style="text-align: center;"><u>Java Basics</u></p> <p>A. Student will be able to write algorithms that include sequential, conditional and iterative control.</p> <p>B. Student will be able to analyze algorithms through statement execution counts and information run-time comparisons.</p> <p>C. Student will be able to analyze problems and develop potential solutions using RAD and pseudocode.</p> <p>D. Student will be able to use primitive data types int, double and Boolean.</p> <p>E. Student will be able to use final keyword for final block scope constants and static final class scope constants.</p> <p>F. Student will be able to use arithmetic operators: +, -, *, /, and %.</p> <p>G. Student will be able to use assignment operators: =, +=, -=, *=, /= and %=.</p> <p>H. Student will be able to use the postfix form of the increment/decrement operators ++ and --.</p> <p>I. Student will be able to use /* */, and // comments.</p> <p>J. Student will be able to use numeric casts (int) and (double) and understand "truncation towards 0" behavior as well as the fact that positive floating-point numbers can be rounded to the nearest integer as (int)(x + 0.5), negative numbers as (int)(x - 0.5).</p> <p>K. Student will be able to use System.out.print and System.out.println for program output.</p> <p>L. Student will be able to recognize and fix compile-time, run-time and logic errors using a debugger, adding extra output statements or hand-tracing code.</p> | <ul style="list-style-type: none"> <li>➤ Programming Project Completion</li> <li>➤ Unit 1 Test</li> </ul> | APCS A Subset                              |

|  |   |   |                      |
|--|---|---|----------------------|
|  | <p>M. Student will be able to convert numerical representations of integers between different number bases (binary, octal, hexadecimal).</p> <p>N. Student will be able to use reference types such as the String class and its associated methods: length(), equals(other), substring (to, from), substring (from), indexOf(str), compareTo(other) as well as String concatenation, conversion of numbers to strings and invoking of toString on objects.</p> <p>O. Student will be able to use escape sequences inside strings \\, \", \n.</p> <p>P. Student will be able to use relational operators (==, !=, &lt;, &gt;=) and logical operators (&amp;&amp;,   , !) including the "short circuit" evaluation of the &amp;&amp; and    operators.</p> <p>Q. Student will be able to use control structures if, if/else, while, for, enhanced for (for each) and return.</p> <p>R. Student will be able to use control structures if, if/else, while, for, enhanced for (for each) and return.</p> <p>S. Student will be able to create, fill and traverse one-dimensional arrays of both primitive types (e.g., int[]) and objects (e.g., String[] ) to include initialization of named arrays (int[] arr = { 1, 2, 3 };</p> |   |                      |
| <p>Unit 2</p> <div style="border: 1px solid red; border-radius: 50%; width: 20px; height: 20px; display: flex; align-items: center; justify-content: center; margin: 5px;">6</div> | <p style="text-align: center;"><b>Advanced Java</b></p> <p>A. Student will be able to use the Math class and its associated methods: abs(int x), abs(double x), pow(base, exponent), sqrt(double x) and random().</p> <p>B. Student will be able to use the Integer class, its constructor, its intValue() method and its MIN_VALUE and MAX_VALUE constants.</p> <p>C. Student will be able to use the Double class, its constructor and its doubleValue() method.</p> <p>D. Student will understand the difference between object equality (equals) and identity (==).</p> <p>E. Student will be able to understand the exceptions that occur when their programs contain errors (in particular, NullPointerException, ArrayIndexOutOfBoundsException, ArithmeticException, ClassCastException, IllegalArgumentException).</p>   | <ul style="list-style-type: none"> <li>➤ Programming Project Completion</li> <li>➤ Unit 2 Test</li> </ul> | <p>APCS A Subset</p> |

|               |  |   |                      |
|---------------|--|---|----------------------|
|               | <p>F. Student will be able to use the List interface to create and use ArrayLists and its associated methods: size(), add(obj), add(index, obj), get(index), set(index, obj), and remove(index).</p> <p>G. Student will be able to create, fill and traverse two-dimensional including understanding that arr[0].length is the number of columns in a rectangular two-dimensional array.</p> <p>H. Student will be able to understand the use of recursion and trace through code that applies it.</p> <p>I. Student will be able to analyze the logic behind programming code and identify correct outcomes.</p> <p>J. Student will be able to provide an overview of the key steps and considerations related to software engineering and design.</p> <p>K. Student will be able to use both top-down and bottom-up implementation techniques.</p> <p>L. Student will be able to develop program methods using procedural abstraction.</p> <p>M. Student will be able to develop appropriate test cases including boundary cases and perform both unit and integration testing.</p> <p>N. Student will be able to identify program correctness through pre- and post-condition and assertions.</p> |   |                      |
| <p>Unit 3</p> | <p><b>6</b></p> <p><b>Object Oriented Java</b></p> <p>A. Student will be able to write a class definition when given a general description of the class.</p> <p>B. Student will be able to identify and use method overloading (e.g. MyClass.method(String str) and MyClass.method(int num)) and understand that the signature of a method depends only on the number, types, and order of the parameters, and not on its return type.</p> <p>C. Student will be able to use visibility modifiers such as public classes and private instance variables, and public or private for methods, constructors and constants (static final variables).</p> <p>D. Student will be able to implement constructors that initialize all instance variables.</p> <p>E. Student will be able to describe the connection between OOP and encapsulation/information hiding.</p> <p>F. Student will be able to construct objects with the new operator, to supply construction parameters, and to invoke accessor and modifier methods as well as modify existing</p>   | <ul style="list-style-type: none"> <li>➤ Programming Project Completion</li> <li>➤ Unit 3 Test</li> </ul> | <p>APCS A Subset</p> |

|   |   |   |                      |
|---|---|---|----------------------|
|   | <p>classes (by adding or modifying methods and instance variables) and designing new classes.</p> <p>G. Student will be able to use static methods appropriately by invoking them only through a class, never an object (i.e., <code>ClassName.method()</code>, not <code>obj.method()</code>).</p> <p>H. Student will be able to use static final variables.</p> <p>I. Student will be able to assign and check for null references.</p> <p>J. Student will be able to use the keyword “this” to pass the implicit parameter in its entirety to another method (e.g., <code>obj.method(this)</code>) and for descriptions such as “the implicit parameter this”.</p> <p>K. Student will be able to use basic code packages and have a reading knowledge of import statements of the form: <code>import packageName.subpackageName.ClassName;</code></p>  |   |                      |
| <p>Unit 4</p> <div style="border: 1px solid red; border-radius: 50%; width: 20px; height: 20px; display: flex; align-items: center; justify-content: center; margin: 5px auto;">9</div> | <p style="text-align: center;"><b><u>Inheritance</u></b></p> <p>A. Student will understand inheritance hierarchies.</p> <p>B. Student will be able to extend classes and have a knowledge of inheritance that includes understanding the concepts of method overriding and polymorphism and implementation of their own subclasses.</p> <p>C. Student will be able to use the keyword “super” to invoke a superclass constructor (<code>super(args)</code>) or to invoke a superclass method (i.e., <code>super.method(args)</code>).</p> <p>D. Student will understand that conversion from a subclass reference to a superclass reference is legal and does not require a cast and that class casts (generally from <code>Object</code> to another class) are part of the AP Java subset, to enable the use of generic collections, for example: <code>Person p = (Person)people.get(i);</code></p> <p>E. Student will be able to define his/her own abstract class and read the definitions of abstract classes and understand that the abstract methods need to be redefined in non-abstract classes.</p> | <ul style="list-style-type: none"> <li>➤ Programming Project Completion</li> <li>➤ Unit 4 Test</li> <li>➤ Successful Completion of 10-hour Lab</li> </ul> | <p>APCS A Subset</p> |
| <p>Unit 5</p> <div style="border: 1px solid red; border-radius: 50%; width: 20px; height: 20px; display: flex; align-items: center; justify-content: center; margin: 5px auto;">7</div> | <p style="text-align: center;"><b><u>Interfaces</u></b></p> <p>A. Student will be able to design, create and modify an interface.</p> <p>B. Student will be able to design, create and modify classes that implement interfaces.</p> <p>C. Student will be able to identify and use interfaces to create polymorphic behavior.</p>  | <ul style="list-style-type: none"> <li>➤ Programming Project Completion</li> <li>➤ Unit 5 Test</li> <li>➤ Successful Completion of 10-hour Lab</li> </ul> | <p>APCS A Subset</p> |
